

1.2 Electric Field of Point Charges

Date: _____

1. Find the magnitude of the electric field 0.050 m from a point charge of +8.0 nC.

2. A charge $+q$ sits at $x = 0$ and a charge $+4q$ sits at $x = d$. Where on the x -axis is the net electric field zero?

3. An electron is released from rest in a uniform field of 2.0×10^3 N/C. Find its acceleration (magnitude and direction relative to $\vec{E}$).
